

HENRY DIBIE

ML / LLM / BACKEND SYSTEMS ENGINEER — OPEN TO REMOTE & RELOCATION

henrymorgandibie@gmail.com · github.com/HenryMorganDibie · linkedin.com/in/kinghenrymorgan · kinghenrymorgan.vercel.app

SUMMARY

Engineer building production ML pipelines, LLM and agentic systems, model/AI evaluation, and backend infrastructure — payment rails, RAG backends, churn/fraud ML platforms with drift monitoring, and full-stack products, largely shipped solo. Public build history on GitHub; portfolio above lists live systems synced automatically from it.

SKILLS

Languages	Python, TypeScript, Java, SQL
Backend / APIs	FastAPI, gRPC, Spring Boot, Node.js, WebSockets, REST
ML / AI	XGBoost, SHAP, RAG (pgvector hybrid search), LangGraph / LangChain, LLM tool-calling evaluation (BFCL), fine-tuning (LoRA), inference serving (vLLM, SGLang)
Data / Infra	PostgreSQL, Docker, GitHub Actions CI/CD, AWS Aurora, Azure
Frontend	React, React Native, Tauri

SELECTED PROJECTS

Switchyard

Java · Spring Boot

ISO 8583 payment switch reference implementation — routing and rail logic behind card and wire transactions, built to portfolio-milestone discipline end to end.

Schema-Watch (own SaaS)

TypeScript · Node.js · CI/CD

npm CLI that diffs live API response shapes — not values — names the exact frontend files a breaking change will break, and fails CI before it ships. Published to npm.

Knowledge RAG API

Python · FastAPI · pgvector

Production RAG backend over Document360 and SharePoint: pgvector hybrid search, per-user ACL filtering, and grounded answers with citations on Aurora Postgres.

Churn Intelligence Platform

Python · XGBoost · Docker · Azure

Production ML platform for subscription churn: FastAPI scoring service, XGBoost with SHAP explainability, PSI-based drift monitoring; real-time and 10k-row batch scoring, containerized.

LLM Tool-Calling Audit

Qwen-2.5 · LoRA · vLLM · SGLang

Independent evaluation of a fine-tuned LLM tool-calling PoC for a FinTech client: BFCL regression decomposition, inference-stack risk assessment, and a production go/no-go recommendation.

Chirp API — Production Audit

gRPC · Python · TypeScript

Security and performance audit of a Twitter-like gRPC API: SHA-256 → bcrypt password migration (zero-downtime), N+1 query fix cutting home-feed queries from 31 to 3 (~90%), request tracing, CI pipeline.

Deal Intelligence Agent

Python · Agentic pipeline

Cross-market financial intelligence agent that reads regulatory filings and financial news continuously, surfacing M&A activity, credit distress, and insider activity as structured analyst-grade briefs.
